Hazards Reporting Performance Review

Five-month review: February - June 2026

Prepared for Senior Leadership | HSE Data Analytics

445

Hazards reported

5

Months reviewed

91.5%

Negative observations

Executive Summary

What the numbers say at a glance

445

Total hazards
reported

~89

Average reports
per month

91.5%

Negative
observations

3.4x

Jun vs Feb
reporting rate*

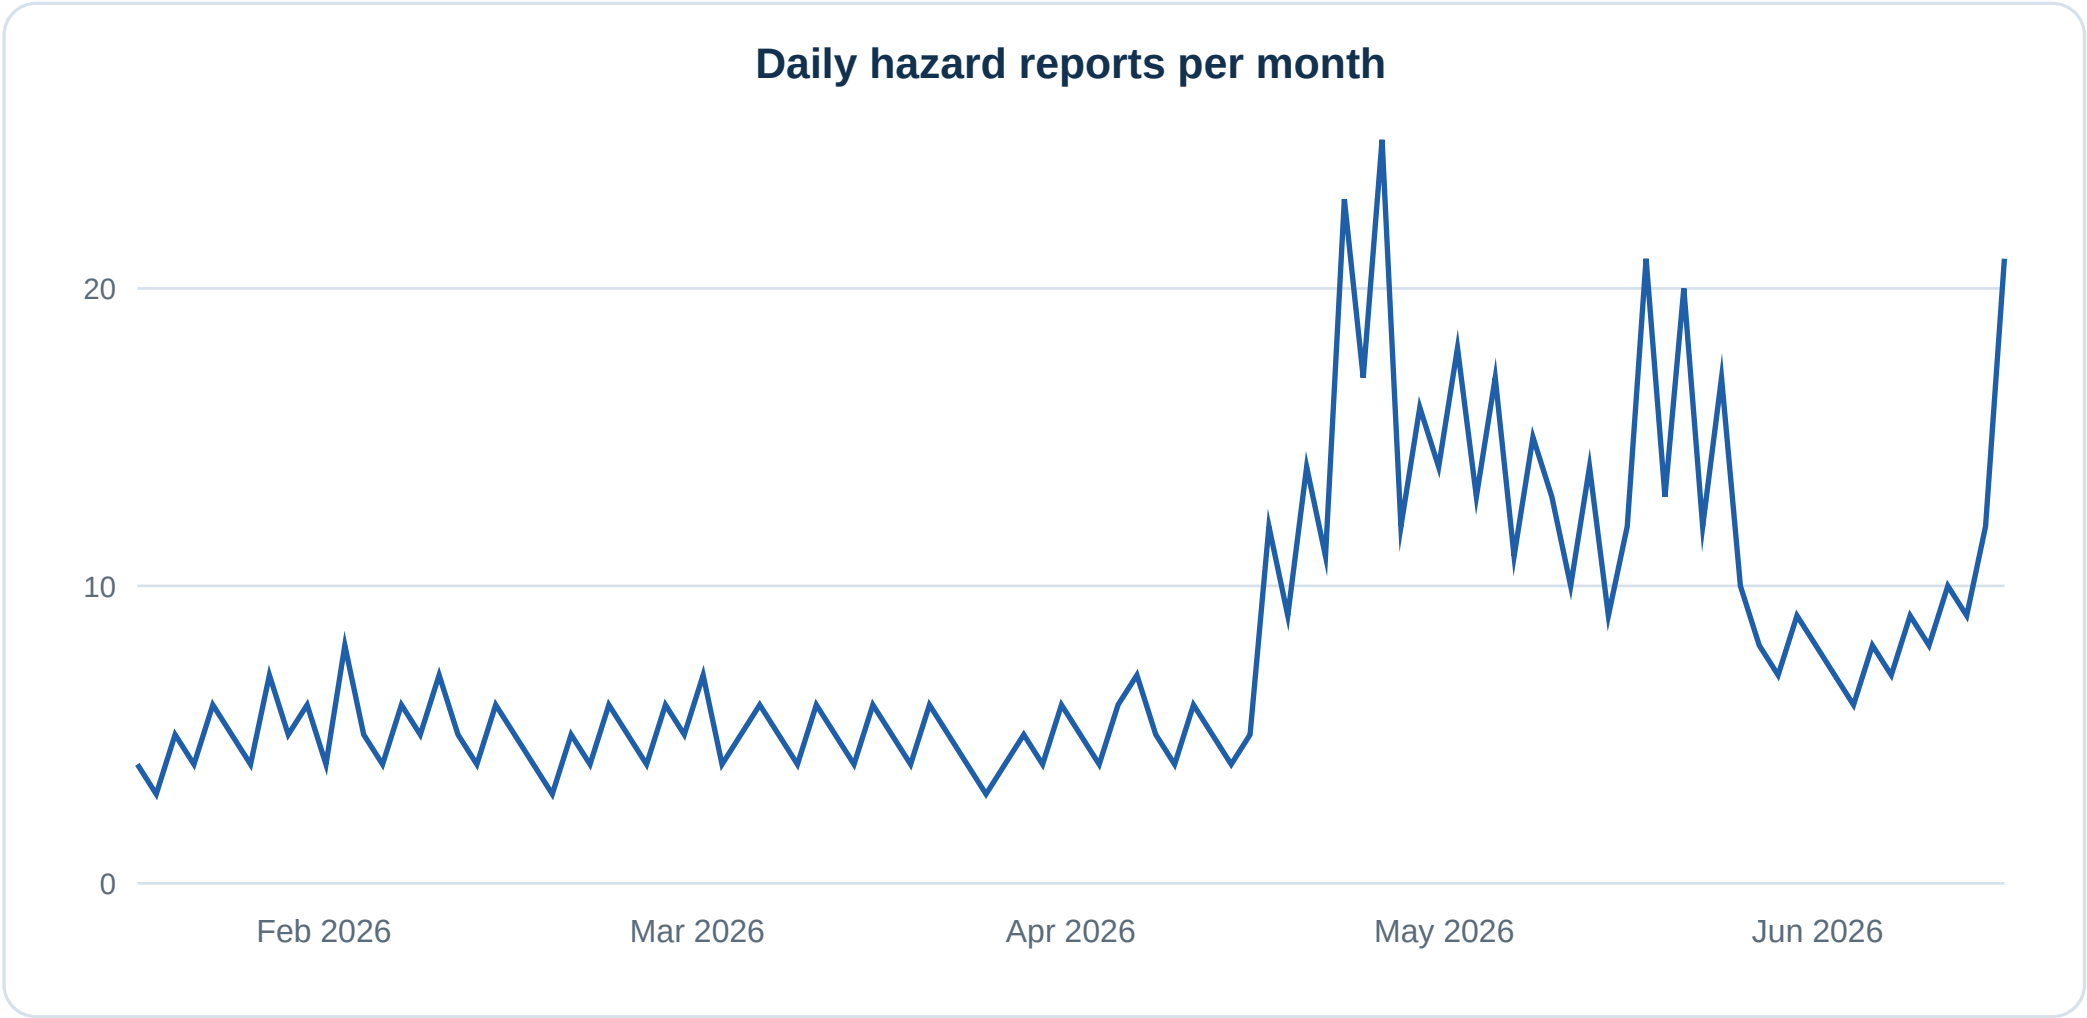

Key messages

- Reporting culture is strengthening: monthly hazard volumes rose sharply from April onwards, with June the strongest month of the period.
- Quality of reporting is skewed to risk identification - 407 of 445 records (91.46%) are negative observations, i.e. actual hazards rather than positive practices.
- Operations dominate the profile: 'Other' (239 / 53.71%) and Safety (132 / 29.66%) account for 83% of all hazards raised.
- Field Facilities and Field Activities are the highest-reporting sub-operations, confirming the field as the primary exposure environment.

**Directional, based on the shape of the monthly trend line; exact monthly counts to be confirmed from the source dataset.*

Reporting Trend

SHE hazards per month, Feb - Jun 2026

Insights

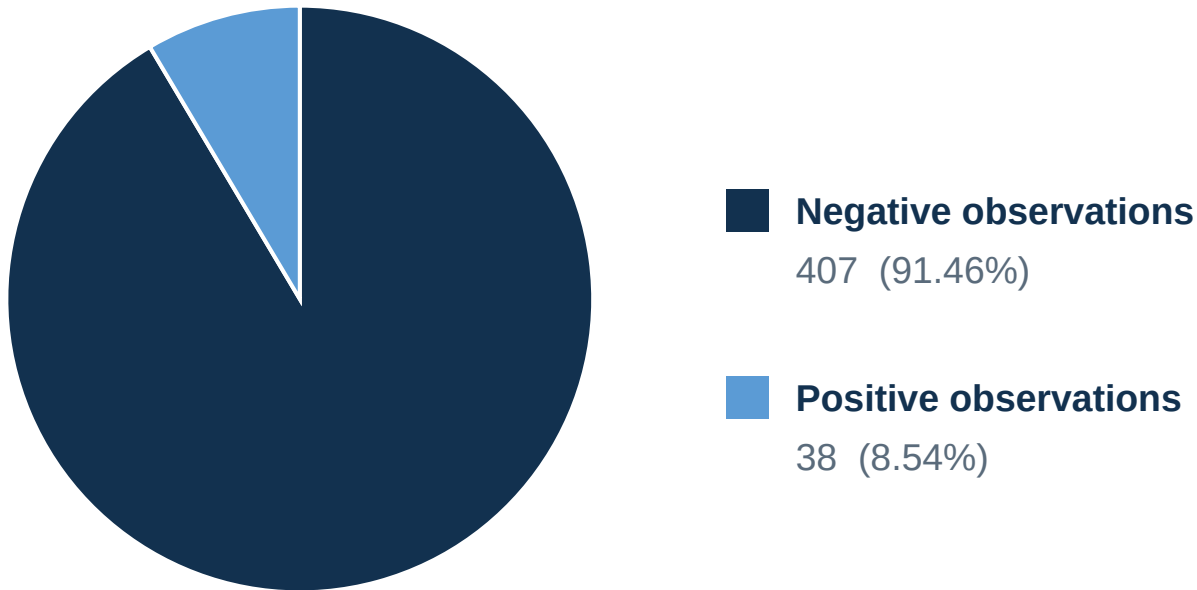

- Feb - Mar: low, flat baseline (mostly 3-8 reports per day).
- Apr: step change - peaks above 20 for the first time.
- May: sustained high activity with repeated spikes.
- Jun: closes the period on a sharp upward spike.

Interpretation: the increase reflects improved reporting engagement (campaigns, inductions, supervisor drives) rather than a proven deterioration in site conditions - severity data is needed to separate the two.

Hazard Profile

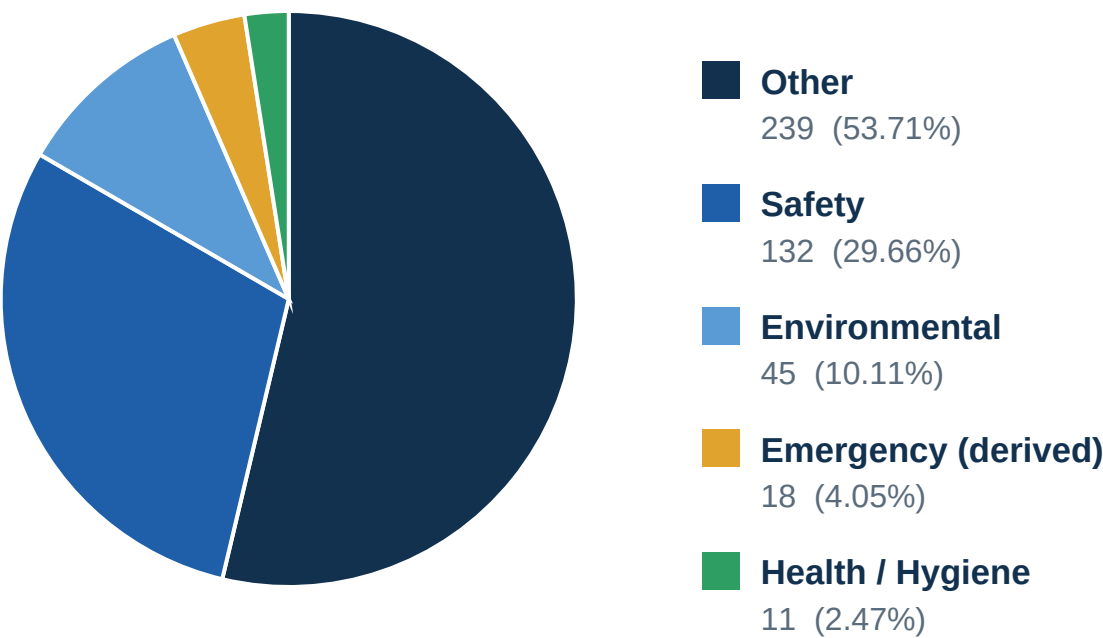

What is being reported and by whom

Hazards Category

Only ~1 in 12 records recognises good practice. A healthier balance (target 25-30% positive) reinforces desired behaviour.

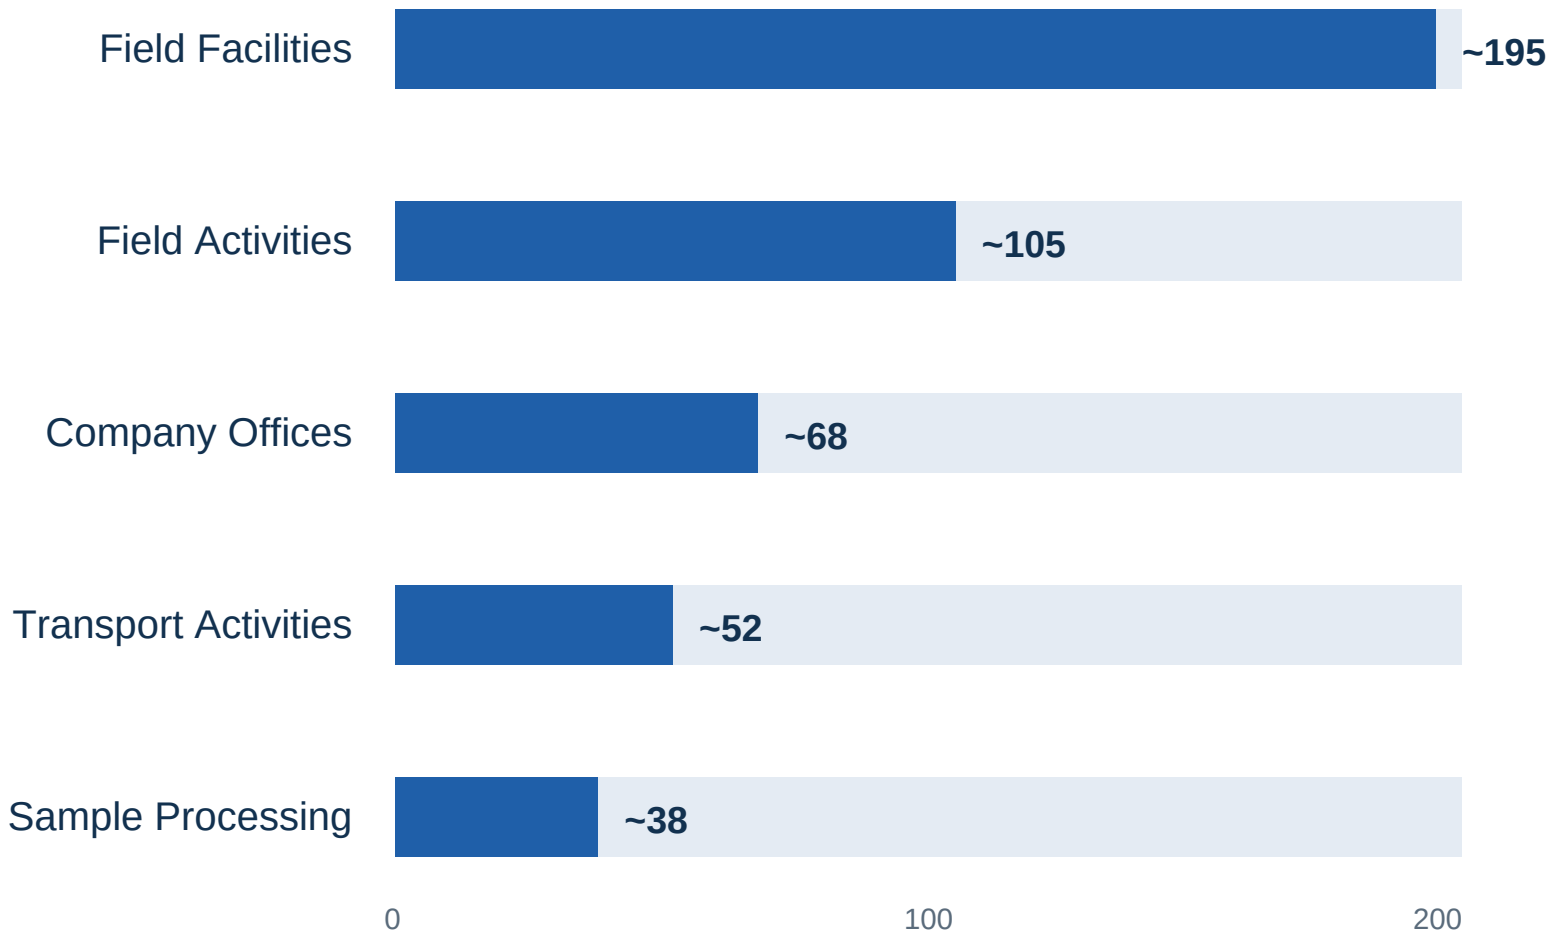

Hazards by Operation

'Other' is the single largest bucket at 53.71% - a data-quality gap that hides where risk truly sits.

Where Hazards Are Reported

Top sub-operations by volume

Values read from the dashboard bar chart and are approximate.

So what?

- Field Facilities alone drives roughly 2 of every 5 reports - it should carry the deepest inspection and close-out focus.
- Field Facilities + Field Activities together represent the bulk of exposure; controls and toolbox talks should be prioritised here.
- Office and transport reporting is present but modest - verify whether this reflects lower risk or under-reporting.

Insights & Risks

Reading behind the dashboard

Reporting is accelerating

Volumes stepped up materially from April and peaked in June. Engagement is improving; the leading-indicator system is being used.

But the mix is unbalanced

91.46% negative vs 8.54% positive observations. The programme is capturing problems well, and recognition of good practice poorly.

'Other' hides the real story

At 53.71%, the largest operations category is undefined. Root-cause analysis and targeted controls cannot be reliably built on this data.

Field exposure is confirmed

Field Facilities and Field Activities dominate sub-operations, consistent with where most person-hours and physical risk sit.

Severity is missing

The dashboard measures volume, not consequence. Without risk ranking and close-out status, leadership cannot judge whether exposure is actually reducing.

Recommendations

Actions proposed for leadership endorsement

ACTION		WHY IT MATTERS	OWNER	TIMING
1	Eliminate the 'Other' category	Redesign the reporting form with mandatory, mutually exclusive operation types and re-code historic 'Other' records.	SHE Manager	30 days
2	Add severity & close-out tracking	Capture risk rating and corrective-action status on every hazard so leadership sees exposure reduced, not just reports logged.	SHE Systems	60 days
3	Drive positive observations	Set a 25% positive-observation target and recognise reporters, to build a balanced, non-punitive reporting culture.	Ops Leadership	Ongoing
4	Focus controls on field operations	Targeted inspections and toolbox talks at Field Facilities and Field Activities, the two highest-volume sub-operations.	Field Managers	Immediate
5	Monthly leadership review	Standing SHE item using rate per 100 employees to normalise volumes and sustain the reporting momentum seen since April.	Exco	Monthly
